

## **Visual Analytics: Introduction to Tableau**

### **Download Tableau Public**

- Go to: <https://www.tableau.com/products/public/download>
- Click "Download Tableau Public"
- Fill in the details to sign up for a Tableau account
- Click "Download Tableau Public" again, and a .exe file will be available for download
- After downloading the .exe file, double click on it to run the installation

Tableau Public Gallery: <https://public.tableau.com/en-us/s/gallery>

---

### **Open the program Tableau Public**

#### **Connect to your data**

- Rename data file: "Northern Africa Conflict"
- Manage metadata
- Look through the data columns – sort, change formats (e.g. date/time), etc.
- Filters
- Combine with another dataset

### **Go to Worksheet to start creating graphics**

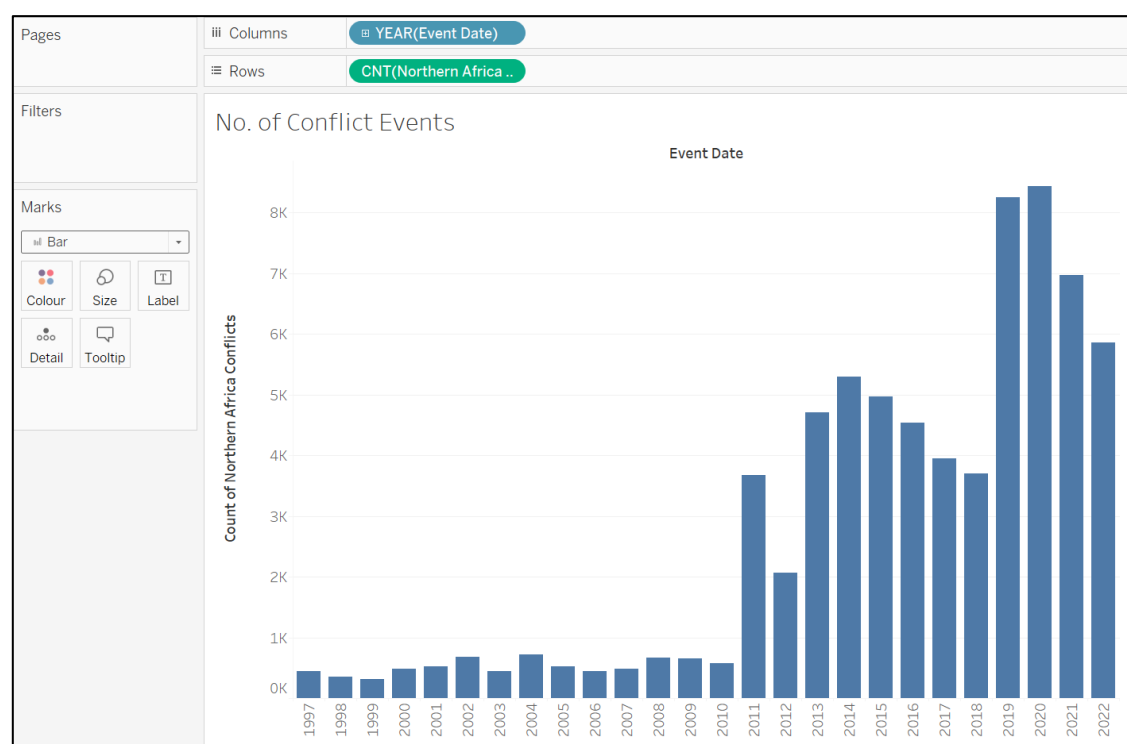

## 1. Fatalities (1997-2022)

- Columns: YEAR(Event Date)
- Rows: SUM(Fatalities)

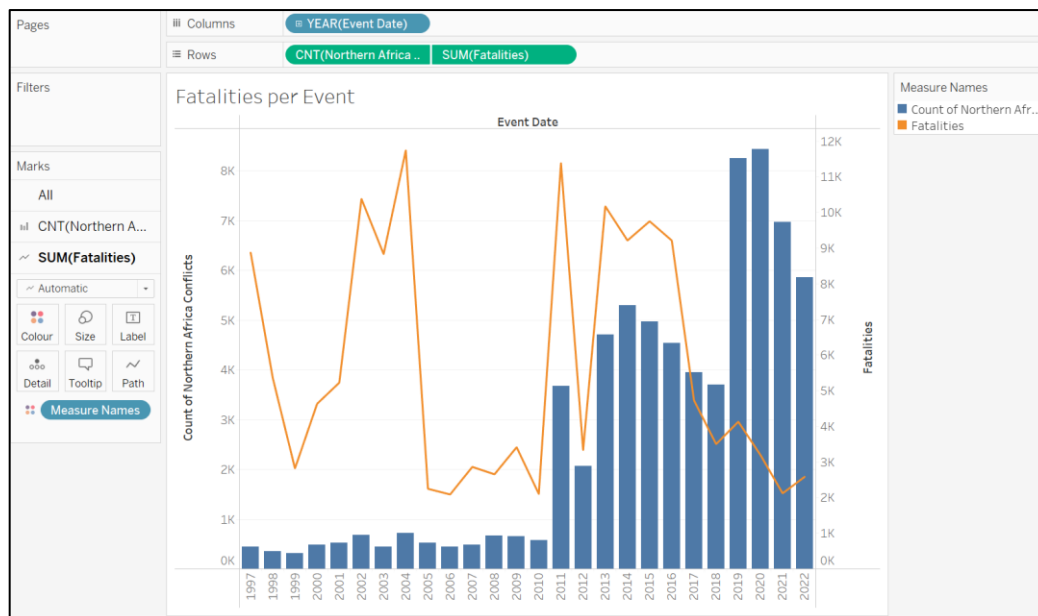

## 2. No. of Conflict Events

- Columns: YEAR(Event Date)
- Rows: CNT(Northern\_Africa...)
- Marks: Bar

### 3. Fatalities per Event

- Columns: YEAR(Event Date)
- Rows: CNT(Northern\_Africa...), SUM(Fatalities)
- Show Me: Dual Combination

- Add in Annotations:

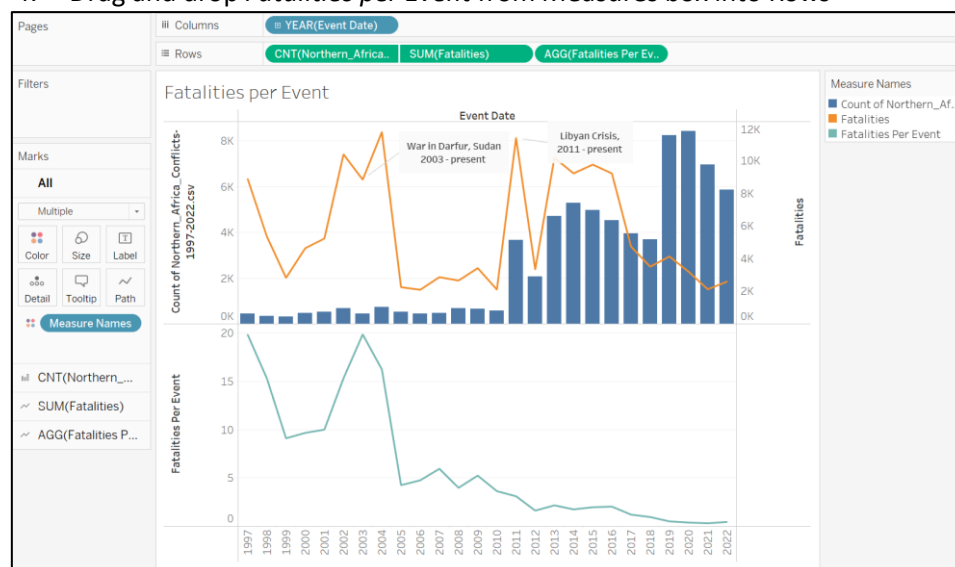

At the marked year, right click > Annotate > Mark...

- 2003: "War in Darfur, 2003 - present" (Sudan);  
\*\*probably does not include deaths by famine.
- 2011: "Libyan Crisis, 2011-present"

#### Normalise Number of Fatalities per Event

- Analysis > Create Calculated Field >  
Rename Calculation1 as *Fatalities per Event*  
Equation:  $\text{SUM}(\text{Fatalities}) / \text{CNT}(\text{Northern\_Africa...})$  --- drag and drop from the Rows box into the Calculation box.
- Drag and drop *Fatalities per Event* from Measures box into Rows

- To change colour for any of the visuals, you can click on the individual legend records.

Duplicate the sheet tab for the next section.

#### 4. Country Comparisons

- To visualise by Country, drag and drop Country to Marks box at
  - CNT(Northern\_Africa...)
  - AGG(Fatalities per Event)
- Delete SUM(Fatalities) from the top pane
- Add *Fatalities per Event* into Rows (to duplicate the records, creating an average line for fatalities per event)
- Right click on the just added *Fatalities per Event* > Dual Axis
- Remove the *Country* dimension from the Colour Marks box
- Right click on right axis > Synchronise Axis
- Change colour on Marks box to highlight the average *Fatalities per Event*
- Right click CNT(Northern\_Africa...) tab > Add Table Calculation
  - Calculation Type: Percent of Total
  - Table (down)
- Label conflicts

(To change number of decimal places:

Right click on the measure > Default Properties > Number format... > Number (Custom), Decimal Place)

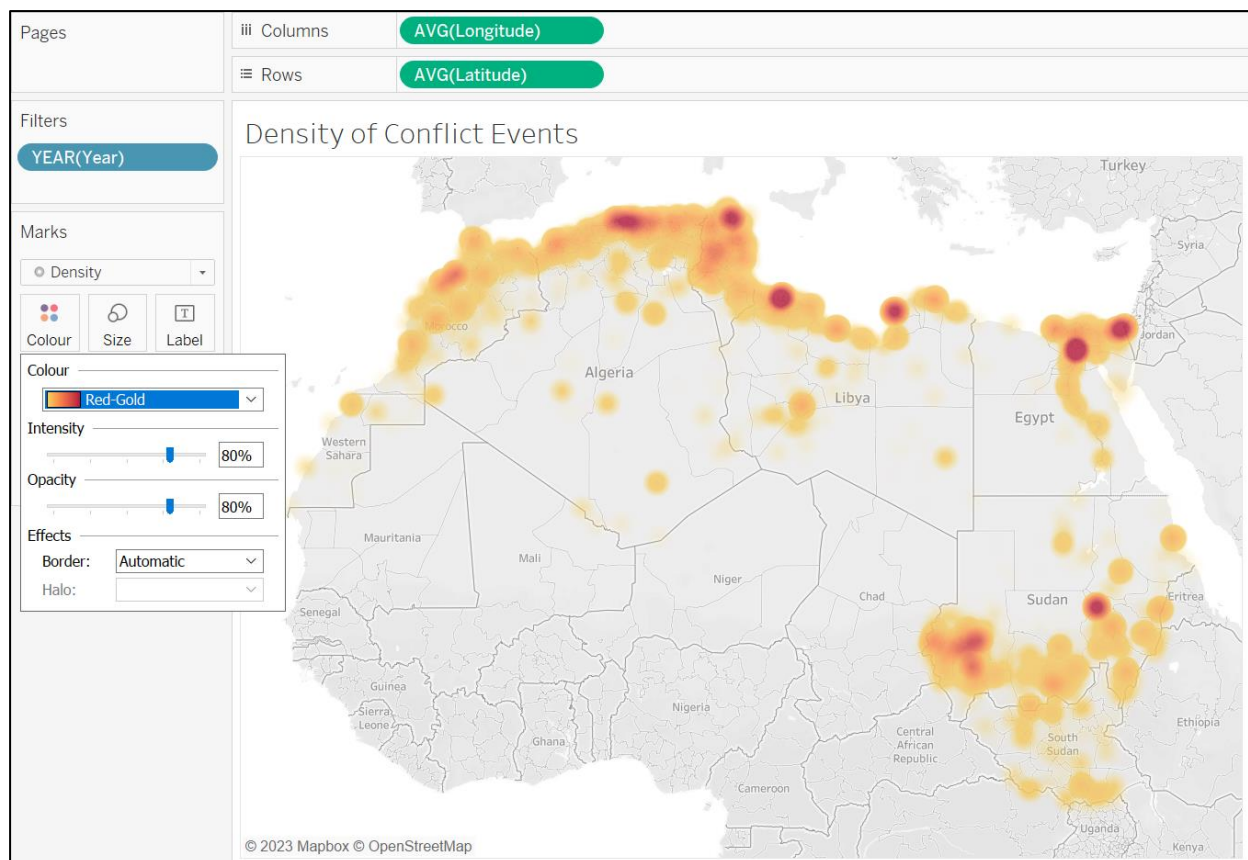

## 5. Density Map of Conflict events

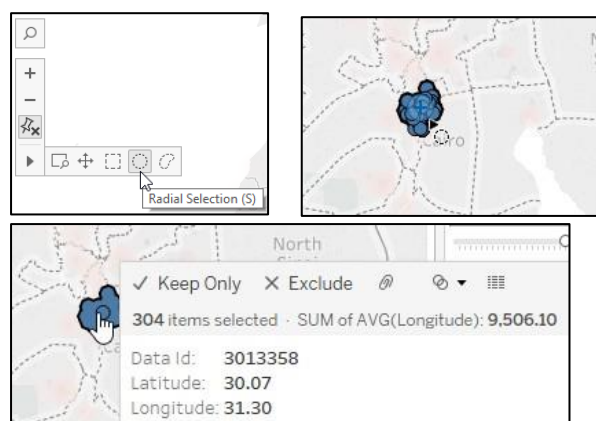

(Press F, click and move mouse to pan across map)

- Columns: *Longitude*
- Rows: *Latitude*
- Marks box
  - Detail: *Event ID Cnty*;
  - Type: Density
- To change the visualization, click on Color > Intensity 80%, Opacity 80%)
- Change YEAR(*Year*) filter type to Single Value (slider) – Change Year to Discrete  
(Look at changes in the concentration of conflicts year-on-year)

\*\* (Alternatively, drag drop “YEAR(*Event Date*) to Pages box” for automatic replay)

- Use the Radial Selection to select data points at the ‘hotspot’ near Cairo, Year 2015
- Select View Data > Full Data

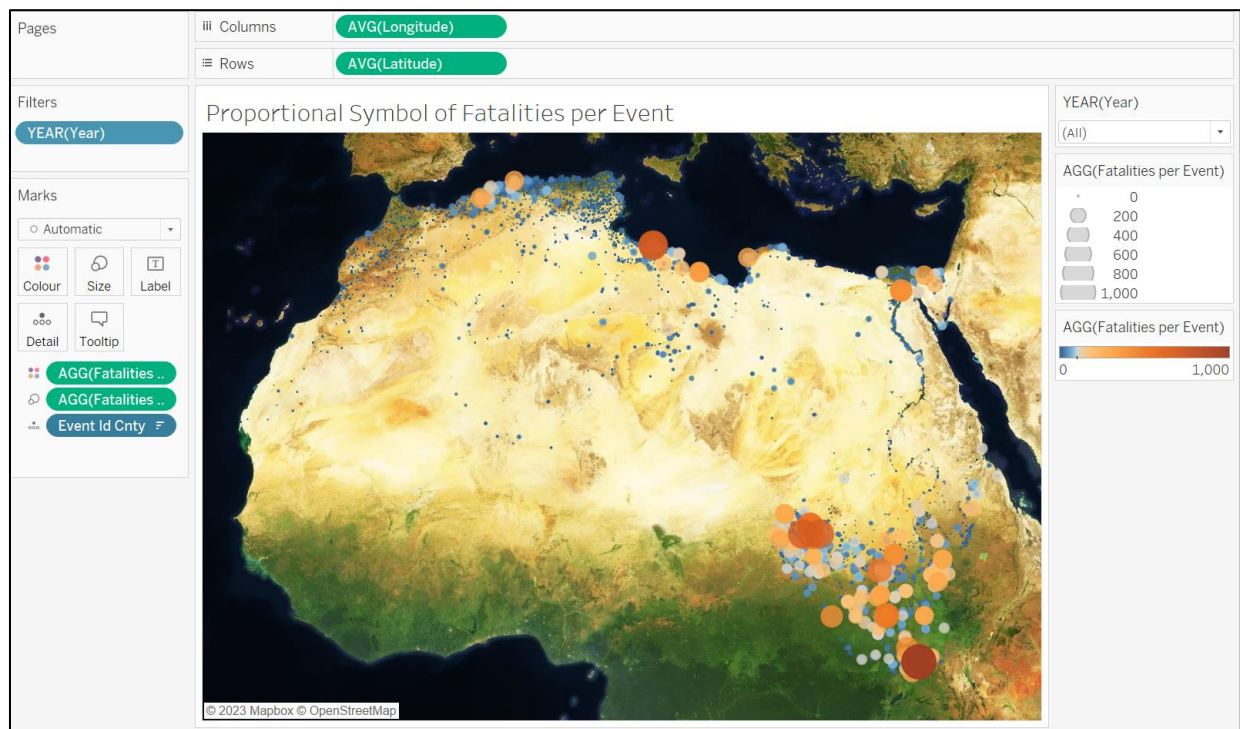

Duplicate the sheet tab for the next section.

## 6. Proportional Symbol Map of Fatalities per Event

Marks Type: Automatic

- a. Size: *Fatalities per Event*
  - Click on Size tab, change to the second notch
- b. Color: *Fatalities per Event*
  - Click on Color tab, Edit Colors, change palette to Orange-Blue Diverging
  - Opacity 80%
  - Select Reversed; Use Full Colour Range
  - Click 'Advanced', change Center to 100
- c. On the Marks box, right click *Data ID* field and Sort
  - Sort By: Field; *Fatalities per Event*
  - (Sorts the data points so that the larger magnitudes appear on top).
- d. To change the type of base map, select Map > Background Map > Satellite

## 7. Creating Groups of data

- a. Refer to the Density Map of conflict locations (#5)
- b. Select the radial selection tool
- c. At the middle of the Cairo hotspot, click, drag to select a group of conflict locations
- d. Hover mouse over the selected area, click Group Members
- e. In Dimensions pane, right click on *Event ID Cnty (group)*, rename to "Hotspots Groups"
- f. Right click on *Hotspots Groups* > Edit Group > Rename groups according to location
- g. Select the other two hotspots (North Sinai, Benghazi) and repeat step f
- h. Drag and drop *Hotspots Groups* to filter box > Unselect 'Other'

## 8. Boxplot – Fatalities Monthly

- Rows: SUM(Fatalities)
- Columns: Hotspots Groups, YEAR(Event Date)
- Filter: Hotspots Groups (unselect Other)
- Show Me tab > Click 'Box Plot'
- Right click on YEAR(Event Date) > Show Missing Values
- Marks box:

Each circle represents each of the 12 months in a year.

- Detail: Event Date > Expand until it shows MONTH(Event Date) > Remove the other two date formats
- Marks Type: Circle (switch the size of the dots)

- May consider filtering the later years which displays more fatality data

## 9. Create Dashboards or Story (Publish online)

## 10. Load data from pdf documents

- New Data Source > PDF file > Select file > State page number: 362
- Double click on the data sheet
- Select "Use Data Interpreter"
- Rename column names to the relevant "Years"
- Top right corner > Click on Filter, Add > Select all the North African countries
